

How to Use This Package.

A complete instruction manual for the AMFN Foundation Package. How the deliverables fit together, how the editorial calendar works in practice, who does what in any given week, and how to read every tab in every file.

Prepared by BotMakers Inc. · May 2026 · For American Fusion Inc. (OTC: AMFN)

1. The Mental Model.

Read this first. Five minutes here will save five hours later.

What this package actually is

The six files in this package are not six separate documents. They are one operating system for AMFN's owned-media engine, split into six files only because that is how Excel, Word, and PDF behave. The right way to think about them is as layers.

The five layers

Layer	Question it answers	Lives in
1. Identity	'What do we sound like? Look like? Stand for?'	Brand Guidelines (01)
2. Plan	'When does which thing go out, on what channel, by whom?'	Editorial Calendar (02)
3. Production	'What's the actual draft for the next 14 days of posts?'	Content Batch (03) — refreshed every two weeks
4. Approval	'Who has to sign off before it publishes, and how?'	Workflow & Compliance (04)
5. Measurement	'Is it working? Where are we vs. plan vs. competitors?'	KPI Dashboards (05)

The flow is always Identity → Plan → Production → Approval → Measurement. Brand Guidelines tells you the voice. Editorial Calendar tells you what to write and when. Content Batch is the actual draft. Workflow tells you how to get it cleared. Dashboards tell you whether any of it is working.

2. The Operating Rhythm.

What happens daily, weekly, monthly, and quarterly. The schedule is the engine.

Daily

Almost nothing requires AMFN attention on any given weekday. The schedule is:

Day	What publishes (typical)
Monday	Company LinkedIn (week-in-review) · Nelson LinkedIn (engineering note) · 2 X posts · 1 Instagram post
Tuesday	Reid LinkedIn (procurement note) · 2 X posts
Wednesday	Company LinkedIn (AI/education long-form) · Nelson LinkedIn (carousel) · 2 X posts · 1 Instagram post · YouTube video (2nd and 4th Wednesdays of month)
Thursday	Company LinkedIn (IR/milestone) · Hawkins LinkedIn (LEGAL-reviewed) · 2 X posts
Friday	Company LinkedIn (founder voice) · Nelson LinkedIn (reflection) · 2 X posts · 1 Instagram post
Saturday	1 X post (long-form quote-tweet)
Sunday	Nothing publishes. Engagement window only. Internal prep day.
1st & 15th of month	Newsletter sends (regardless of weekday)

Weekly

This is the rhythm AMFN feels. One touch per week, typically Tuesday or Wednesday.

When	Who	What	Effort
Monday AM	BotMakers	Ships next week's drafts to AMFN designated approver — typically 20–25 posts across all channels in a single shared doc or Slack thread.	0 (AMFN inbound)
Mon–Wed	AMFN approver + named execs	Approver reviews GREEN/YELLOW posts. Named executives (Nelson, Reid, Hawkins) approve their own ghost-written posts. Counsel CC'd on YELLOW and RED.	~30 min approver, ~15 min each exec
Wed–Thu	Counsel (if RED)	Counsel reviews and approves any RED-classified posts in writing.	Variable, only when triggered

Wed–Sun	BotMakers	Schedules approved posts per the editorial calendar. Posts publish automatically on their scheduled days.	0 (BotMakers handles)
Friday EOD	BotMakers	Updates the KPI Dashboards (weekly tracker, content output, engagement quality) with the week's numbers. Sends summary to AMFN.	0 (AMFN inbound)

Monthly

- **60-minute strategy review** with AMFN executives and BotMakers. Review the previous month's dashboards, decide what to push harder, what to drop. Approves the next month's editorial direction.
- **YouTube production cycle.** 2 videos shoot, edit, and publish on the 2nd and 4th Wednesdays. CEO Update (Nelson) and Tech Deep-Dive alternating.
- **Competitive benchmark snapshot.** BotMakers manually visits each competitor's LinkedIn / X / YouTube once a month and logs the numbers into the Competitive Benchmark tab. (Day 1 of each month.)
- **Earned media push.** One coordinated outreach effort per month — 5–8 reporters/podcasts/analysts pitched on a specific angle tied to that month's biggest story.

Quarterly

- **Full executive review.** 90 minutes with Hawkins, Nelson, Reid, and BotMakers. Reset 90-day targets, recalibrate the three-lane voice architecture, agree on quarterly themes.
- **Facility photography session.** Half-day shoot at the Kepler facility. Builds the visual library for the next quarter.
- **Compensation and investor cycle alignment.** Editorial calendar adjusts around earnings releases, quiet periods, and any planned material disclosures.

3. Reading the Editorial Calendar.

File: 02_Editorial_Calendar_90Day.xlsx — the most-used file in the package.

What's in the file

Open the file in Excel or Google Sheets. You will see seven tabs along the bottom:

Tab	Purpose
README	Conventions, cadence summary, content pillar codes. Read first.
Content Pillars	The six themes every post must map to (BIP, EDU, AI, DEF, IR, FV). Use this to verify any new post idea has a home.
Master Calendar	THE MAIN TAB. Day-by-day plan, every post on every channel, ~340 entries across the 90-day Foundation phase.
LinkedIn Company	Filtered view — only company-page posts. Use when reviewing just the company-voice cadence.
Executive Posts	Filtered view — only Nelson, Reid, and Hawkins ghost-written posts. Use when prepping an individual executive for their week's approvals.
X Twitter	Filtered view — only X posts. Use when prepping the X queue.
Instagram	Filtered view — only Instagram posts. Use when prepping image direction.
YouTube & Newsletter	Long-form publishing cadence (12 pieces over 3 months) — broken out because these have their own production cycle.

Reading a row of the Master Calendar

Every row of the Master Calendar tab has nine columns. Here is how to read them:

Column	What it means	Example
Day	Day number in the 90-day plan (1–90).	17
Date	Calendar date the post is scheduled to publish.	2026-07-01
Day of Week	Helps spot cadence patterns at a glance.	Wednesday
Channel	Where it publishes. One of: LinkedIn Company / LinkedIn — Nelson / LinkedIn — Reid / LinkedIn — Hawkins / X / Twitter / Instagram / YouTube / Newsletter.	LinkedIn — Nelson

Owner	Who drafts and who approves. 'BM' = BotMakers drafts. 'BM/Nelson' = BotMakers drafts, Nelson approves. 'LEGAL' = securities counsel must approve.	BM/Nelson
Pillar	Which of the six content pillars this post belongs to. Used to ensure topical balance.	EDU
Working Title / Hook	The angle for that day's post. Editor turns this into a full draft. Not the final headline.	Carousel: how direct energy conversion works
Status	PLANNED → DRAFTED → REVIEWED → APPROVED → SCHEDULED → PUBLISHED. Updates as the post moves through the workflow.	APPROVED
Notes	Editor scratchpad — visual direction, links, legal flags, anything that helps the next person pick this up.	Pair with photo of unit

Content pillar codes

Every post in the calendar carries one of six pillar codes. The pillars exist so the editorial mix stays balanced — we never want a week with five education posts and zero defense posts, or four investor relations posts and no founder voice. Use this table as your decoder ring:

Code	Pillar	What it means	Frequency
BIP	Build in Public	Texatron unit progress, engineering decisions, lab shots, hires, the actual work.	~30% of mix
EDU	Education	What is aneutronic fusion? Why D–He-3? How does direct energy conversion work? Evergreen, search-visible.	~25% of mix
AI	AI Energy	AMFN POV on the AI power crisis. Anchored to IEA data and hyperscaler capex.	~15% of mix
DEF	Defense	EO 14299, ANPI, Janus, Project Pele context. Reid's primary lane.	~15% of mix
IR	Investor Relations	Milestone updates, listing progress, capital structure. LEGAL review required.	~5% of mix
FV	Founder Voice	Personal-voice posts from Nelson, Reid, or Hawkins. Reflections, perspectives, asides.	~10% of mix

The status lifecycle

Every post moves through six statuses. The Status column in the calendar is the single source of truth for where each post sits at any given moment.

Status	Means	Who advances it
PLANNED	Slot reserved on the calendar with a working title. No draft exists yet.	Default state. Editor advances when drafting begins.
DRAFTED	Full draft exists in the content batch document or shared editor.	BotMakers editor.
REVIEWED	BotMakers strategy lead has internal-reviewed for voice, fact, and Reg FD smell-test.	BotMakers strategy lead.
APPROVED	AMFN designated approver (and named executive if applicable) signed off. Counsel cleared if YELLOW or RED.	AMFN approver / executive / counsel.
SCHEDULED	Loaded into the publishing tool (Hootsuite, native scheduler, etc.) with a fire time.	BotMakers editor.

PUBLISHED	Live. Engagement clock starts. BotMakers monitors for the first 2 hours.	Auto-set when post fires.
------------------	--	---------------------------

Rule of thumb for AMFN: if you open the calendar on any given day, every post in the next 7 days should be at APPROVED or SCHEDULED. Anything still at DRAFTED or REVIEWED within 7 days of its publish date is a flag for BotMakers to escalate.

4. From Calendar to Published Post.

The end-to-end lifecycle of a single post, with examples.

Example: tracing one post from idea to publication

Let's follow Post 12 from the First Content Batch (Deliverable 03) — Brent Nelson's 'Why D–He-3 instead of D–T?' carousel — from its calendar slot through to publication.

Day –7 · Drafting starts

BotMakers editor opens the calendar, sees the scheduled slot for Wednesday Day 10: **LinkedIn — Nelson · BM/Nelson · EDU · 'Carousel: how direct energy conversion works.'**

Editor drafts the full post in the content batch document. Adds it under the Nelson section. Updates calendar Status to **DRAFTED**.

Day –5 · Internal review

BotMakers strategy lead reviews. Checks voice (does it sound like Brent?), checks facts (neutron energies, ignition temps), runs the Reg FD smell-test (is anything in here material and non-public? — no, it's educational, GREEN-class). Status moves to **REVIEWED**.

Day –4 · AMFN approval

Post is sent to Nelson directly (since it's under his name) and CC'd to AMFN designated approver. Nelson reads, possibly edits a sentence or two, signs off via email or shared doc comment. Status moves to **APPROVED**. Because it's GREEN-class, no counsel review needed.

Day –3 to –1 · Scheduling

BotMakers schedules the post in LinkedIn's native scheduler (or Hootsuite, or whichever tool AMFN settles on in the kickoff) for Wednesday 10am Central. Visual assets — the carousel slides — are attached. Status moves to **SCHEDULED**.

Day 0 · Publish

Post fires at 10am Central. Status auto-updates to **PUBLISHED**. BotMakers monitors comments and engagement for the first 2 hours. Any inbound that needs a response gets the standard template treatment from Deliverable 04.

Day +1 · Logging

BotMakers logs first-24-hour engagement numbers into the Engagement Quality tab of the KPI Dashboards (Deliverable 05). If the post over- or under-performed by 2x against typical Nelson posts, it gets flagged in the next Friday summary.

The whole lifecycle is 7 days. That's the standing rhythm — BotMakers always works one week ahead of the publication date so there's time for review, edits, and counsel if needed. If something has to publish faster (breaking news, urgent reaction, real-time engagement opportunity), the same lifecycle compresses to ~24–48 hours with parallel approval threads.

How RED-classified posts differ

Posts that touch material disclosures (Hawkins capital-markets posts, OTCQB updates, milestone announcements) follow the same flow but with an extra stage between APPROVED and SCHEDULED: **counsel formal review and written approval.**

Practically: AMFN's securities counsel needs 3–5 business days lead time on any RED post. The editorial calendar accounts for this — RED posts are drafted 10+ days ahead of publish, not 7. RED posts also only publish AFTER any corresponding 8-K or press release is on file.

5. Using the KPI Dashboards.

File: 05_KPI_Dashboards.xlsx — updated weekly by BotMakers, reviewed weekly by AMFN.

The color convention

Every cell in the dashboards follows one of three rules. Knowing the rules means you never break a formula or overwrite the wrong thing.

Color	Meaning	Action
Blue text	This is an input cell. The number was typed in by a person.	Safe to update weekly. This is where you put new follower counts, content output, etc.
Black text	This is a formula. The number is calculated from other cells.	Do not overwrite. If you need to change a number behind it, find the blue cell that feeds it.
	Header row.	Do not edit. Structural.

Tab-by-tab walkthrough

90-Day Targets and 12-Month Targets

Two snapshot dashboards showing where AMFN is versus the agreed targets. The only column you update is **'Current'** (blue cells) — typically Friday EOD, with whatever the live channel counts are. The '% to Target' column updates automatically.

Use these two tabs in your weekly executive update — they tell the story in one glance.

Weekly Tracker

Time-series view: 14 rows for 14 weeks. Each Friday, take a snapshot of every channel's follower count and type it into that week's row (blue cells). Over time this builds the growth curve that becomes the 'are we trending toward our target?' answer.

Content Output

How many pieces published per week, versus the plan (27/week). The Variance column shows whether you're keeping up. Three consecutive weeks of negative variance is a flag for the monthly strategy review.

Engagement Quality

Follower counts alone are vanity. Engagement quality is the real signal. Track average impressions per LinkedIn post, LinkedIn engagement rate, average X impressions, YouTube views, profile views, and inbound DMs. A rising follower count with falling engagement means the content isn't landing — that triggers a creative review.

Competitive Benchmark

Track Commonwealth, Helion, TAE, General Fusion, Thea, and AMFN month-by-month. May 2026 baseline numbers are pre-loaded (Commonwealth 30,663 LinkedIn, Helion 26,822, AMFN 0). First of

every month, manually visit each company's pages and log the numbers. The gap closing or widening tells you whether AMFN is gaining ground.

Earned Media Log and Inbound Log

Two free-form logs. Every non-IBN media mention goes in the Earned Media Log with outlet, tier, headline, URL, estimated reach. Every direct inbound (procurement, capital, talent, press, partnership) goes in the Inbound Log with source channel, who reached out, what they want, current status. Both logs are the proof-of-value when the CFO asks 'is this working?'

6. Common Scenarios.

What to do when reality breaks the plan. A playbook for AMFN.

Q: A major fusion industry story breaks. Should we react in real-time?

Yes, but inside the workflow. BotMakers drafts a reaction post within 4 hours, classifies it (usually GREEN if it's industry commentary, YELLOW if it ties AMFN to the story), routes for approval. AMFN approver moves to top of inbox. If approved, publishes same day. If the story is directly competitive (e.g., Helion announces something), do NOT publish a reactive post that looks defensive — wait one news cycle, then publish a substantive, fact-anchored response.

Q: An executive wants to post something not in the calendar.

Encouraged — but it still goes through the workflow. The exec drafts (or BotMakers drafts on their behalf), it gets classified, it gets reviewed, it publishes. Off-calendar posts get logged in the calendar with a 'OFF-CAL' tag in the Notes column so the dashboards still capture them.

Q: A scheduled post needs to be pulled at the last minute.

Use the calendar kill-switch: change Status to 'PULLED' and add a one-line reason in Notes. BotMakers removes from the scheduler. No backfill required — drop the slot rather than scrambling to substitute weak content.

Q: Counsel asks us to change a post that's already published.

Treat it as a Reg FD scenario (Crisis #5 in Deliverable 04). Do NOT delete the post — deletion is itself a disclosure event. Counsel directs the remediation, which is typically a same-day 8-K or supplementary disclosure that brings the previously selective content into compliance.

Q: An executive is traveling and can't approve their post for the week.

Two options: (1) reschedule the post to next week, (2) the executive pre-authorizes BotMakers in writing to publish their approved batch on the original schedule. Most execs do option 2 once they trust the voice — typically by week 4 or 5.

Q: We hit a Day 90 target early. Now what?

Recalibrate. Hitting an early target means either the target was too soft or the engine is outperforming. The monthly strategy review is where this gets reset — new target, new growth trajectory in the dashboards, possibly a scope conversation about leaning harder into what's working.

Q: A piece of content goes viral.

Three things happen: (1) BotMakers monitors and responds in the engagement window — this is where inbound leads come from, (2) the piece gets logged in the Engagement Quality tab as an outlier so we can dissect what worked, (3) the next monthly strategy review asks 'what is the second post in this format?'

Q: An investor or analyst asks a specific question in DMs.

Use the standard response template from Deliverable 04, page 6. Route immediately to AMFN designated approver. Never answer non-public material questions directly — even if you know the answer. Direct them to SEC filings.

Q: A post sits at DRAFTED for more than 7 days.

BotMakers escalates to AMFN designated approver via email. If still no movement after another 48 hours, BotMakers proposes pulling the post and rescheduling rather than letting it rot in the queue.

Q: The competitive benchmark shows Helion or Commonwealth growing 3x faster than us.

Expected for months 1–6. Their head start is real. The dashboard is there to show the gap is closing (or not) over the full 12 months — not for week-to-week panic. If the gap is still widening at month 9, that's the trigger for a strategic conversation.

7. Glossary.

Terms used across the package, decoded.

Term	Definition
AMFN	American Fusion Inc. (OTC: AMFN). The parent public company.
ANPI	Advanced Nuclear Power for Installations program. DoD/DIU program contracting nuclear vendors to deploy reactors on military bases.
Aneutronic	Fusion reactions producing minimal neutron radiation. D–He-3 and proton-boron-11 are the two leading aneutronic fuels.
BIP / EDU / AI / DEF / IR / FV	The six content pillars. Build in Public / Education / AI Energy / Defense / Investor Relations / Founder Voice.
BM	BotMakers Inc. — the agency executing the engagement.
BotMakers strategy lead	Senior BotMakers reviewer who handles Stage 2 internal review on all content before AMFN sees it.
Cadence	How often a channel publishes. LinkedIn Company runs 5x per week. Nelson runs 3x. Reid runs 2x. Hawkins runs 2x. X runs 10x. Instagram runs 3x.
D–He-3	Deuterium + helium-3. AMFN's chosen fuel pair. Aneutronic. Helion uses the same pair.
D–T	Deuterium + tritium. Standard fusion fuel pair, easier physics but produces high-energy neutrons. The path most government-funded fusion programs are on.
Day-15 kickoff	The working session in the first week after Day 14 delivery where AMFN and BotMakers wire up the live channels (claim accounts, optimize profiles, integrate site footer).
Designated approver	The single named AMFN individual empowered to approve GREEN and YELLOW content and to escalate RED to counsel.
EO 14299	Executive Order 14299 (May 2025), directing DoD to deploy a nuclear reactor at a U.S. military installation by Sept 30, 2028.
Foundation phase	The first 90 days of the engagement. Sets up the editorial brain. Followed by 9 months of Authority phase.
GREEN / YELLOW / RED	Content classification. GREEN = no AMFN-specific milestones. YELLOW = restates already-disclosed info. RED = potentially material or new disclosure.
Hawkins	Richard Hawkins. CEO of American Fusion Inc. Capital markets and corporate voice. All his posts are LEGAL-reviewed.
IBN	InvestorBrandNetwork — AMFN's existing newswire relationship. Continues for SEC-required disclosures.

Janus	U.S. Army program designating installations to host nuclear microreactors. Currently 9 sites named.
Kepler	Kepler Fusion Technologies — operating subsidiary of AMFN where Nelson is CEO.
LEGAL	Tag in the Owner column meaning securities counsel must review before publish.
Nelson	Brent Nelson. CEO of Kepler Fusion Technologies. Technical and operational voice.
Reg FD	SEC Regulation Fair Disclosure. Prohibits selective disclosure of material non-public information by public companies.
Reid	Samuel Reid. Government Strategy & Procurement Advisor. Defense and government voice.
Status	Where a post sits in its lifecycle. PLANNED → DRAFTED → REVIEWED → APPROVED → SCHEDULED → PUBLISHED.
Texatron	AMFN's pre-production fusion unit. 5 MW pre-production scale, currently in build at Southlake, Texas.
Three-lane architecture	The model in which Nelson, Reid, and Hawkins each occupy a distinct content lane to avoid voice collision: technical, defense, and capital markets respectively.

Closing.

One page of operating philosophy before you put this manual down.

Three principles that govern everything in this package

1. The calendar is the engine.

If the calendar slips, the engine sputters. The single most important habit for AMFN is to treat the weekly approval window (Mon–Wed) as protected time. Posts that miss the approval window do not publish on time, dashboards do not move, momentum stalls. Everything depends on the calendar staying live.

2. Specificity beats volume.

Every post in this package is written to be specific — named numbers, named programs, named physical components, named timelines. The discipline is what makes American Fusion sound like an engineering company instead of a cleantech startup. If a draft can't be specific (because the information is not yet public, or because counsel hasn't cleared the language), we hold the post rather than publish vague.

3. The dashboards tell you the truth.

Follower counts. Engagement rates. The competitive benchmark. The earned media log. The inbound log. Five tabs that, read together, tell AMFN whether the engagement is working. The single most important review meeting is the monthly strategy review — bring the dashboards, talk through what they say, decide what to change. Six monthly reviews over the 90-day Foundation phase are what convert a publishing engine into a strategic asset.

If you remember nothing else from this manual:

Editorial calendar drives everything. Approvals run on a 7-day rhythm. Every post is classified GREEN / YELLOW / RED. Dashboards are updated Fridays. Monthly review meeting is non-negotiable. When in doubt, escalate.

Questions, edits, or escalations — BotMakers Inc. · botmakers.ai · +1 833 872 2636
